

Choosing Biobased

The logical step to make

Is sustainable construction just a pipe dream or are you taking steps to make it happen?

Holonite would be pleased to help you make your green targets a reality with Biobased products made from 90% natural resources. These renewable resources are partially sourced from rapeseed oil and by-products from the food industry, which are environmentally friendly and a good alternative to using fossil resources.

The overall composition of Biobased products is 90% natural resources to 10% fossil resources. In total, 54% of the binding agent

can be traced back to rapeseed oil and by-products from the animal feed industry. This renders the use of products like corn and soya beans superfluous – such products influence the production of foodstuffs and can harm natural surroundings. If you want to be socially responsible, choose Holonite Biobased.

About Holonite

Holonite has been the number one company for composite stone in the Netherlands since 1969. As a producer and distributor of thresholds, window sills and wall covering elements, Holonite has acquired a leading position in the construction and window frame industry. Holonite provides the Dutch, Belgian and German new-build and renovation market with standard and custom-made façade and finishing elements. Holonite works with everyone from architects to contractors and cooperative housing associations to private individuals on an indirect level. Holonite products are Cradle to Cradle certified.
